microSD Cards	38
CompactFlash Cards & CFast Cards	40

Manufacturing Base

About Transcend

30+ Years of Experience

Founded in 1988, Transcend Information Inc. is a leading global supplier of embedded memory products and storage solutions. Transcend has been granted over 140 patents for our award-winning products, developed by our in-house R&D team in close cooperation with our strategic component suppliers.

Global Support

Transcend operates 12 branch offices worldwide, including in Los Angeles, Maryland, Silicon Valley, Hamburg, Rotterdam, London, Tokyo, Seoul, Shanghai, Beijing, Shenzhen, and Hong Kong. Our headquarters and manufacturing site are both located in Taipei, creating an optimum product supply system with a global reach.

Stability & Reliability

Transcend utilizes selected components from 1st tier suppliers, and leverages advanced technologies such as Corner Bond, Anti-sulfur, Wide Temperature, SLC Mode, etc., to ensure reinforced structure, superior durability, and longer product use life under demanding industrial applications.

Our Strengths

Transcend's embedded storage solutions include SSDs, DRAM modules, memory cards, USB flash drives, and more, all designed to deliver advanced memory and storage technology. Our products can be found in applications across various industries, such as enterprise data servers, automotive, automated manufacturing, 5G networks, AIoT, healthcare, surveillance, and smart retail.

Top Quality Storage Solutions

- Branded chips to ensure the highest quality
- Exclusive software for efficient device management

R&D Expertise

- More than 140 patents
- 100+ person in-house R&D team
- Extensive embedded product development experience

Management of Product Life Cycle

- Embedded-grade product lifecycle management
- Fixed BOM management
- In-house ERP system
- Regular roadmap updates

Facilities & Production Process

- Highly automated production
- Rigorous reliability and environmental testing
- Stringent quality control: IQC, IPQC, FQC, OQC

Reliable Supply

- Strategic alliance and direct relationship with top-tier suppliers

Global Operation & Worldwide Support

- Professional technical support and failure analysis reports
- 12 branch offices worldwide
- Localized sales and FAE support

Applications

Transcend's embedded solutions are utilized across various industries.

Transportation

Fleet Management | Event Recorders | Navigation

Healthcare

Medical Tablets & AIO PCs | Medical Imaging | Patient Monitoring

Gaming

Casino Gaming | Lottery | Player Tracking

Automation

Robot Controllers | Human Machine Interfaces

Network & Telecom

Industrial Switches | 5G Base Stations | Network Security Appliances

Embedded Computing

Digital Signage | Fanless PCs | Embedded PCs

AIoT

Edge Computing | AI Platforms

Defense

Rugged Laptops & Tablets | Rugged Rackmount Devices

Solutions & Technologies

Transcend utilizes various technologies to optimize the durability, reliability, and stability of our memory and storage devices. We can also provide customized services to adapt our products to your requirements.

DURABILITY

112-layer 3D NAND Flash

112-layer 3D NAND Flash technology delivers higher capacities, performance, endurance, and lower costs, making it an ideal solution for modern storage needs. Transcend's 112-layer 3D NAND SSDs provide high I/O performance and low latency, making them perfect for 5G, automotive, AIoT, and cloud computing applications.

Dynamic Thermal Throttling

Our Dynamic Thermal Throttling technology ensures that our SSDs operate within a safe temperature range, thereby protecting users' data and prolonging the product lifespan. A built-in thermal sensor in the controller constantly monitors the drive temperature, and when the temperature exceeds a safe level, drive speeds are throttled down until a safe temperature is reached.

SLC Mode

SLC Mode SSDs strike a cost-performance balance between different flash types by emulating the behavior of SLC NAND flash. This provides users with SLC-level endurance and performance at a reasonable cost.

SECURITY

TCG Opal Compliance

TCG Opal SEDs (self-encrypting drives) are ideal for industries where data security is of crucial importance. Transcend's Opal-compliant SSDs incorporate hardware-based AES 256-bit encryption; ensuring data is safeguarded starting from the manufacture of the storage device to system installation and management. Furthermore, TCG Opal compliant SSDs do not impact host performance since encryption and decryption are conducted on the drives themselves. Transcend's Opal-compliant SSDs offer sector-specific security, allowing managers to grant different permissions to each user, ensuring compartmentalized data security. The SSDs also feature pre-boot authentication; they can only be booted when the user is verified, preventing unauthorized access.

AES Encryption

The Advanced Encryption Standard (AES) is a FIPS-approved cryptographic algorithm specifically used to protect electronic data. Transcend's SSDs equipped with hardware-based AES provide a comprehensive solution for applications that handle sensitive data or require high data security.

RELIABILITY

Anti-Sulfur Technology

Transcend's anti-sulfur DRAM modules meet the ISA Standard S71.04-2013 level G2 and the ASTM B809-95 standard. Anti-sulfur resistors, which have a protective layer above vulnerable silver alloys, are used exclusively to prevent malfunctions caused by sulfuration.

Wide Temperature

Transcend's products are stringently tested at the component level and at the device level within an extended thermal range. All wide-temperature products are required to pass rigorous tests conducted in a temperature and humidity chamber to ensure reliable performance in temperatures ranging from -40°C to 85°C. Wide-temperature DDR4 and DDR5 memory modules are tested to operate between -40°C to 95°C.

Extended Temperature

Products rated for extended temperatures are designed for reliable operation in temperatures ranging from -20°C to 75°C. Transcend offers this as standard on a wide range of 112-layer and 96-layer 3D NAND SSDs.

Corner Bond & Underfill

Corner Bond / Underfill are technologies used to increase reliability under high thermal stress, high gravitational acceleration and high fatigue cycle applications. By spreading stresses throughout the key components with a mechanical bond, less stress is concentrated on the solder joints. It is widely used in applications where stringent thermal cycling performance and shock resistance are required.

Conformal Coating

Conformal Coating increases protection for Transcend's embedded flash modules and DRAM products against various harsh environmental conditions such as moisture, dust, corrosion, extreme temperature, and chemical contaminants. Acrylic coatings are the most preferred choice for embedded applications due to their excellent moisture and electrical resistance.

STABILITY

Power Loss Protection (PLP) & Power Shield (PS)

Power Loss Protection (PLP) and Power Shield (PS) are two technologies provided by Transcend to prevent internal NAND flash data loss during a sudden power outage. When power is lost, the drive controller will stop accepting new write commands to ensure data integrity. PLP SSDs utilize tantalum capacitors to increase the amount of time the drive controller has to flush data from DRAM into NAND flash. Power Shield technology provides a power loss protection mechanism to Transcend's flash memory cards, USB flash drives, and other portable devices. The technology ensures that the device can complete the ongoing write operation and prevent data corruption or loss due to power interruption.

Embedded Software Solutions

Leverage our embedded software solutions to stand out from the others. See how Transcend can empower your business and boost your growth.

SDK Available

Software Development Kits (SDKs) can be provided to adapt our software to many operating systems.

Software and Hardware Integration

Seamlessly integrate hardware and software for complex applications.

From Edge to Cloud

Work in tandem between the cloud and the edge to achieve utmost flexibility.

Broad Support

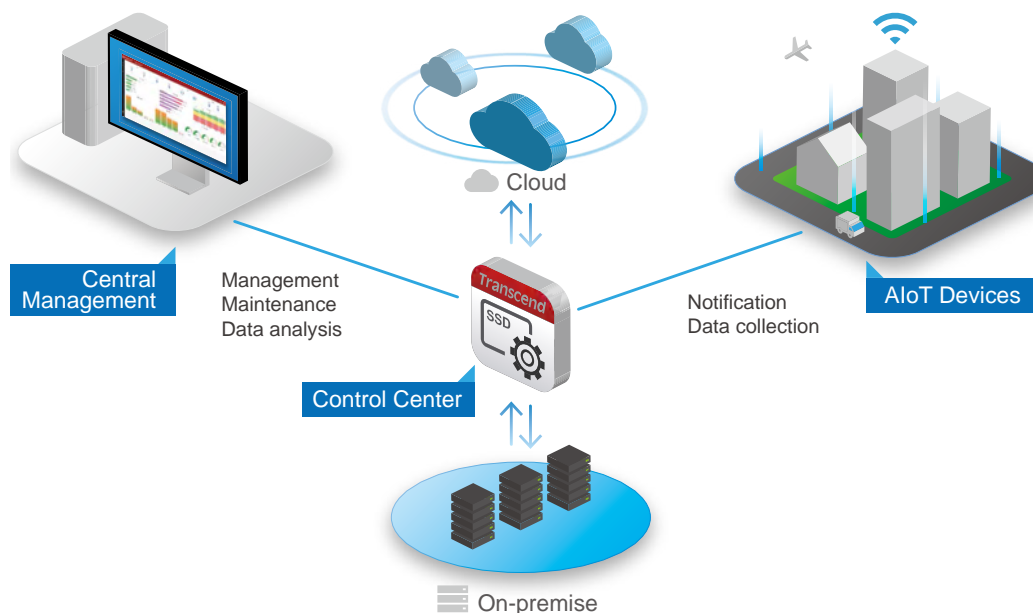

Our software solutions build strong foundations for SSDs, DRAM, flash and other devices.

Control Center

Management

Transcend's Control Center allows users to easily manage and monitor multiple storage devices deployed at the edge. Our SaaS solution is platform-agnostic and can be deployed on either public cloud services such as AWS or Azure or on private clouds.

Consolidated Information

Offers data analysis and clear information on an intuitive interface to help users make informed decisions.

Remote upgrade & monitoring

Allows for remote monitoring of device health status and firmware updates.

Early Warning System (EWS) & Instant Notices

Detects potential issues and notifies users in real-time, enabling them to take proactive measures.

Transcend's Scope Pro is a convenient software package suitable for offline embedded systems. It offers useful features such as drive information, S.M.A.R.T. analysis, diagnostic scans, health checks, and system cloning.

*Scope Pro CLI for Linux OS.

Efficient Monitoring

Monitor the health status of devices, including available, used, and total capacity, temperature, endurance, bad blocks, and wear-out indicators.

Optimized Performance

Conduct speed tests and health scans. Rearrange data stored in SSDs or SD/microSD cards to optimize performance.

System Clone

Perform a system clone by duplicating the operating system (OS), programs, and user data to a new Transcend SSD.

TCG Opal Toolbox | ATA Security Toolbox | UFD Security Toolbox

Transcend offers a wide range of security toolboxes for use with our embedded solutions to enhance data security.

Utilize the Opal Toolbox to configure passwords, locking ranges, initiate pre-boot authentication (PBA), and revert functions to increase drive security.

Determine the desired security level and perform lock, unlock, and drive erase functions.

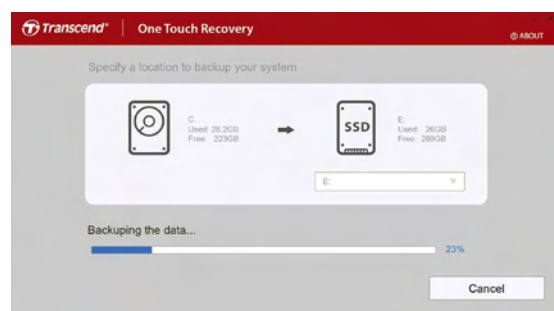

Enable write protect and OTP functions to increase the security of USB flash drives.

One Touch Recovery

One Touch Recovery safeguards digital assets by backing up crucial data to hidden partitions.

Enhanced Efficiency

By backing up data beforehand, One Touch Recovery eliminates the hours spent restoring compromised systems.

Flexible Customization

Back up and restore data from user-defined disks. The maximum number of disks is tailored to fit each user's requirements.

Remote Backup & Recovery

Can be operated remotely, allowing users to respond to emergency situations quickly, minimizing downtime and related costs.

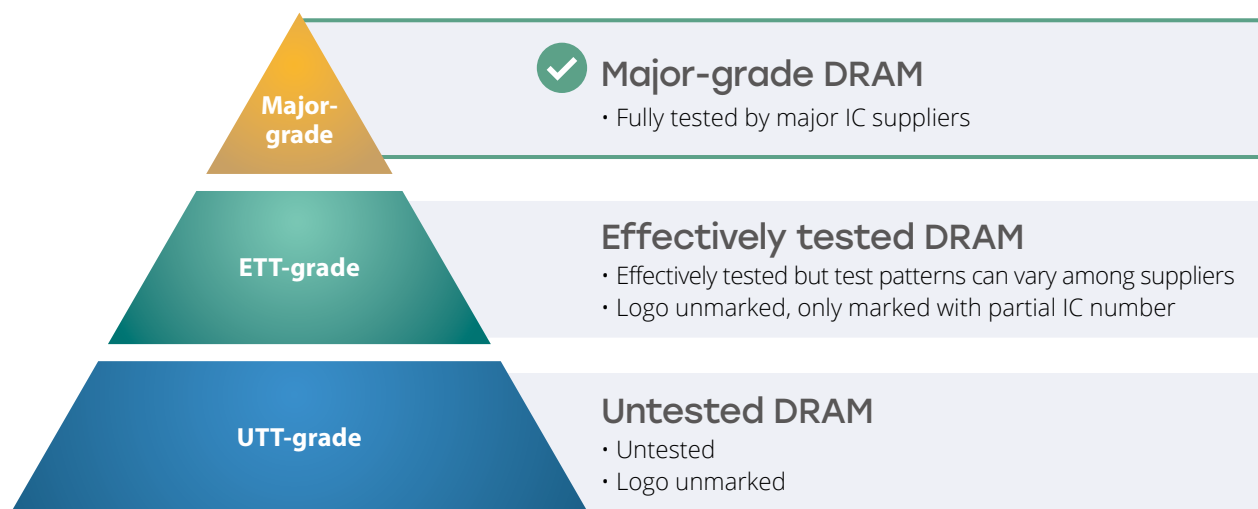

DRAM Modules

Transcend's DRAM modules are offered in a variety of form factors to accommodate different embedded devices used in industrial applications. Each DRAM module is manufactured using only the highest-quality DRAM memory chips and components, and is individually tested to ensure stability and compatibility.

IC Grade

Transcend's industrial-grade DRAM memory modules only utilize major-grade DRAM chips which have undergone the original IC manufacturer's in-house testing procedures.

Product Line

	Module Type	Speed (MT/s)	Operating Temperature	Capacity
DDR5	Unbuffered Long-DIMM / Unbuffered SO-DIMM	4800	0°C~95°C / -40°C~95°C	8GB~32GB
	ECC Long-DIMM / ECC SO-DIMM			16GB~32GB
	Registered Long-DIMM			16GB~32GB
DDR4	Unbuffered Long-DIMM/ Unbuffered SO-DIMM	3200	0°C~95°C / -40°C~95°C	4GB~32GB
		2666		2GB~32GB
	ECC Long-DIMM / ECC SO-DIMM	3200		4GB~32GB
		2666		4GB~32GB
	Registered Long-DIMM	3200		8GB~64GB
		2666		4GB~32GB
DDR3	Unbuffered Long-DIMM / Unbuffered SO-DIMM	1600	0°C~85°C / -40°C~85°C	1GB~8GB
	ECC Long-DIMM / ECC SO-DIMM			2GB~8GB
	Registered Long-DIMM			4GB~8GB

*Transcend offers technology customization options for selected models. Please contact us for more detailed information.

Product Highlights

DDR5 Memory Modules

Unlock Next-Gen Performance and Efficiency

Transcend's embedded DDR5 4800 DRAM modules follow JEDEC standards, featuring high I/O throughput and low latency. The DDR5 standard introduces an on-DIMM power management integrated circuit (PMIC) that enables optimized energy control, improved power efficiency, and reduced signal complexity. The on-die ECC prevents bit errors, bringing together advanced data integrity and system reliability. Transcend's embedded DDR5 product line covers a variety of module types including Unbuffered Long-DIMM and SO-DIMM, ECC Long-DIMM and SO-DIMM, as well as Registered Long-DIMM. With 30 μ " gold finger PCBs and anti-sulfurization technology, Transcend's DDR5 modules deliver unmatched performance and reliability in high-performance computing (HPC) applications.

Key Features

Power Management
IC (PMIC)

1.1V Low Power
Supply

On-Die ECC

Major-Grade DRAM
Components

JEDEC®
Compliant

30 μ " PCB Gold Fingers

Extra-thick gold-plated connectors enhance signal transmission and prevent corrosion, ensuring long-term reliability.

Anti-Sulfuration

Anti-sulfur resistors are protected from sulfide contamination resulting from industrial environments and pollution.

DDR5

Module Type	Long-DIMM	SO-DIMM
Speed	4800 MT/s	
Capacity	8GB~32GB	
Voltage	1.1V	
PCB Height	1.23 inches	1.18 inches
30μ" PCB Gold Finger	Wide Temp. / ECC / Registered	
Anti-Sulfuration	Wide Temp. / ECC / Registered	
Operating Temperature	0°C~ 95°C / -40°C~ 95°C

SSD Solutions

Transcend's Solid-State Drive (SSD) solutions offer fast and reliable performance in a wide variety of form factors, interfaces, and storage capacities suitable for devices operating in extreme industrial conditions. With support for Transcend's Power Shield (PS), Dynamic Thermal Throttling, and S.M.A.R.T. analysis technologies, our SSDs are designed for durability and reliability in large-scale embedded deployments.

Transcend also provides SSDs with technologies such as Power Loss Protection (PLP) to ensure data integrity in applications with unstable power supply; TCG Opal 2.0 to enhance data security; and SLC Mode to increase endurance and performance. These special product lines help address issues commonly encountered in embedded computing applications.

SSD Solutions

Product Highlights

112-Layer 3D NAND SSDs

Experience the SSD revolution with Transcend's 112-layer 3D NAND flash technology, boasting high die density, large capacity, superior performance, and low cost per bit. With quality flash from top-tier suppliers, our 112-layer SSDs can withstand extended temperatures (-20°C~75°C) and provide industrial-grade reliability to tackle heavy workloads.

U.2 SSDs

Introducing Transcend's latest embedded-grade U.2 SSD series, UTE210T. These high-capacity solid-state drives deliver competitive NVMe performance, perfect for data centers, hyperscale computing, media streaming, and big data analytics. With blazing-fast PCIe Gen 4x4 speeds, UTE210T U.2 SSDs ensure lightning-quick data processing and significantly improve system responsiveness under heavy workloads.

Flash Solutions

Transcend's flash solutions include USB flash drives, USB flash modules, and eMMC. Our USB flash drives feature a compact and portable design, ideal for applications where reliability and data retention are crucial. Our flash modules offer a simple solution for integrating SSD storage technology into legacy PC- and laptop-based systems.

World-Class Manufacturing Base

High-Speed SMT Lines

Transcend operates 16 high-speed Surface Mount Technology (SMT) production lines in its Taipei factory. Highly automated facilities are widely implemented to guarantee consistent quality, high capacity, and to minimize human errors.

Proven Quality

From product development to mass production, Transcend follows rigorous procedures to ensure products deliver advanced reliability and stability. We conduct environmental testing in walk-in chambers where different temperatures and humidity can be simulated. We also carry out full-scale burn-in tests to identify defective components. Certified by ISO 9001, ISO 14001, and QC080000 certifications, we operate our manufacturing process under internationally-acknowledged standards.

Quality Control

Transcend adopts a stringent quality control process in production. The process includes four stages: Incoming Quality Control (IQC), In-Process Quality Control (IPQC), Final Quality Control (FQC), and Outgoing Quality Control (OQC). The entire QC process covers material checking at the very beginning, through to final inspection before the products are shipped to our customers.
